ABSTRACT

Over 190 listings comprise this general bibliography. The bibliography presents sources of information on architecture and design, economics, energy, landscape and landscape architecture, and urban concepts. Listings provide current information on these topics. Most date from 1972 through 1975. The bulk of the documents are project reports, commercially published books, and government reports and bulletins. Citations are alphabetized by author within each category and include the title, date, number of pages, availability, and price. An author and title index and a list of some publishers' addresses conclude the document. (JR)

* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. Nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *
* responsible for the quality of the original document. Reproductions *
* supplied by EDRS are the best that can be made from the original. *

"Although the significance of environmental psychology has been recognized for some time, the implications of this field of ecological research to the practice and teaching of architecture remained largely unexplored. Now, a group of young architects has synthesized many recent changes in architectural philosophy in a single, comprehensive volume.

The papers presented reflect the changing attitudes which govern the teaching and practice of architecture. Augmenting the papers selected are original introductions, overviews, and in-depth evaluations by the co-authors.

The book is divided into five parts. The first section deals with emerging issues in architectural theory and practice, points out examples of inappropriate design, and explores new approaches to designing the physical environment. Part Two examines the fundamental processes of environmental psychology and their impact on architectural theory. The third section describes the methodological contribution of the behavioral sciences to architectural programming and evaluation. Part Four is a summary, placing the objectives of the book in a retrospective framework. The final section of the book is an extensive reference bibliography to assist researchers in pursuing further study.

"Emphasizing the aesthetic aspects of water in the landscape, this report explores the contribution of water to the environments of recreation and everyday life. To identify the values of water in this role, a classification framework is developed for native characteristics and man-made changes to be considered together. The scope of the study includes evaluation based on quality recognition and makes recommendations for needed policies, planning guidelines and research.

151. Logan, Harry Britton. A Traveler's Guide to North American Gardens. New York: Charles Scribner's Sons, 1974, 253p.

A new guide designed to help garden lovers discover the gardens, arboretums, nurseries and parks of the U.S. and Canada. The book is arranged by state and by city and town within the state. Nearly 3000 gardens are described giving location, times and conditions of admittance, main features, and seasonal specialities.

"The field of urban psychology as envisioned by the authors is a rich and exciting one - both informative in its present perspectives and challenging in its potential...convincingly demonstrates the necessity for cooperative interdisciplinary efforts. They reveal the short comings of considering the psychology of the individual without references to the large-scale social systems in which he is enmeshed; they illustrate the importance of taking into account the historical antecedents of contemporary city life; and they demonstrate the necessity of viewing psychological processes as wholly intertwined with political, legal, economic, or educational factors."
